Dinith Priyankara

Software Engineer

Badulla, Sri Lanka | +94 76 900 6586 | dinithp132@gmail.com | LinkedIn | GitHub

Profile

Computer Engineering graduate with a one year full-stack internship on a live production platform: React frontend, NestJS/TypeScript backend services, third-party integrations, event-driven messaging, gRPC microservices, and cloud CI/CD. Skilled at using AI coding tools to ship faster, and quick to adopt new tools.

Skills

Languages & Frameworks: TypeScript (NestJS/Node.js, React), Java (Spring Boot), Python
Backend & Data: PostgreSQL, Redis, BullMQ, REST APIs, gRPC/protobuf
Architecture: Microservices, Event-Driven Systems, Saga pattern, Role-Based Access Control
Cloud & DevOps: Firebase, Azure, AWS (Basics), Docker, GitHub Actions, Linux (daily use)
AI & Automation: LangGraph, MCP, n8n, AI assisted development (Claude Code, Cursor)

Education

University of Jaffna 2022 – 2026
BSc. Engineering (Hons.) in Computer Engineering *Sri Lanka*

Experience

Kingteza Software Solutions Nov 2025 – Oct 2026
Software Engineering Intern *Colombo, Sri Lanka*

- Built the **Exely** channel manager integration (**NestJS**, **TypeScript**, **PostgreSQL**, **Redis/BullMQ**): property configuration, room/rate mapping, and automated booking ingestion with queued scheduling, retries, and failure recovery, keeping OTA bookings in sync for 50+ bookings/day per live hotel deployment.
- Developed event-driven staff messaging and task workflows (**Firebase Cloud Functions**, **Pub/Sub**, WhatsApp, Telegram): HTTP-triggered inbound handlers and queued outbound delivery, so staff complete tasks by message reply.
- Built a task management agent (**MCP** server, **n8n**, WhatsApp): let housekeeping and floor staff manage tasks through chat without logging into the PMS dashboard.
- Deployed an event-driven audit logging pipeline (**Azure Functions**, **GitHub Actions** CI/CD): captured operation events in real time for production diagnostics and compliance tracking across hotel deployments.
- Designed **gRPC/protobuf** service contracts across property, booking, and billing microservices for type-safe inter-service communication, and applied the **Saga** pattern to coordinate multi-step workflows.
- Contributed to CI/CD automation: Remote Config-as-code deployments via **Firebase CLI** and automated multi-site **Firebase Hosting** releases on merge to production.

Projects

Cogniterm: Intelligent Linux CLI Terminal (Electron, Python, AWS EC2) | GitHub Jul – Nov 2025

- Built a Linux desktop terminal assistant with an Electron front end and a Python backend on AWS EC2, using IPC-based command execution and Linux system integration to automate shell tasks.

AI Reasoning Agent with Tool Integration (Python, LangGraph) | GitHub Jun – Jul 2025

- Built a LangGraph agent that routes multi-step questions to symbolic math, web search, and other tool APIs, with retry-once and fallback handling when a tool fails or returns unusable data.

WebRTC Music Jam Platform (Node.js, Socket.IO, WebRTC) | GitHub Mar – Jun 2025

- Built a real-time platform for multi-user audio/video jam sessions, with server-side room creation and cleanup and Socket.IO signaling between participants.

Automated Examination System (Spring Boot, PostgreSQL) | GitHub Jan – Jun 2025

- Built a full-stack exam platform with authentication, role-based access for administrators, lecturers, and students, a normalized PostgreSQL schema, and REST APIs.

Understanding LSTM Behaviors with Explainable AI (Research) Jan 2025 – Aug 2026

- Studied which features and time steps drive LSTM predictions, using SHAP, LIME, and Integrated Gradients.
